

**SPEAKER BIO:**

**After 15+ years in management consulting and innovation, we created Quartz Labs to fix what's broken in innovation and NPD.** We help innovation and R&D teams compress development cycles from months to weeks using AI that embeds production, regulatory, and budget constraints from day one. Our foundations in human-centered design keep us obsessively focused on what matters: ensuring the technology serves the team — not the other way around — on a shared quest to ship exceptional products.
